November Project Updates

Uganda:

In the month of September, the Uganda project completed their 521 document which gives them approval to travel in January. The January trip will be an assessment of the new projects: the coffee nursery and the water supply system, in the area of Kalisizo. The group on the trip will also check on the past implementations and see how the chapter's work has benefited the community.

chapter in general but especially Uganda come to the Bake Sale on November 13th. They are looking for volunteers to cover shifts as well as contributors who are willing to help bake the goodies. Contact: ugandalead@ewb-umn.org.

Guatemala:

In the Guatemala group, the model ram pump is in its testing phase. The group decided that the official next project is the Simajuleu water distribution

If you are looking to help out the

system. The 524 for Guatemala is due in November. The 524 is a preliminary design document that will outline the upcoming project in Simajuleu.

This month Guatemala wants to give a special thank you to their amazing mentor Kim Haglund. She has been a long time mentor for the group but really stepped it up this year with the planning and testing of the ram pumps. We appreciate everything she does for us as well as her huge support of the University.

New Project:

The new project is still working on choosing their next project. The group is filling out a decision matrix of all their options and deciding on the future project within the month.

Exciting things are happening in the chapter. Look on the website ewb-umn.org for meeting times and come check one out!

What do all those numbers mean?

- 512 – A project summary document. It is a nice thing to have on file and useful for fundraising.
- 521 – Pre Assessment
- 522 – Post Assessment
- 523 – Alternative Design
- 524 – Preliminary Design
- 525 – Pre Implementation
- 526 – Post Implementation
- 530 – Pre Monitoring
- 531 – Post Monitoring

All of these documents are required by EWB-USA before traveling. Traveling usually signifies progress on a project for people. However, moving forward with these documents and completing them is a good way to measure progress of the chapter.

Engineers Without Borders' Vision

Our vision is a world in which the communities with whom we partner have the capacity to sustainably meet their basic human needs, and that our student members have enriched global perspectives through the innovative professional educational opportunities that the EWB-USA Program provides. EWB-USA UMN envisions a community of students developing and applying various skills for the improvement
